

Greens Report Committee Meeting

January 2018

Greens

Greens have been performing well despite the weather.

- Top dressed with about 4 tons of sand
- Slit 3 times
- Cutting height 5mm lowering to 4.75 for competitions
- Monthly application foliar feed
- 8,9,10 and 15 have been sprayed with a selective fungicide called Instrata

Aprons

Aprons have been cut at least once a week to a height of 10mm

Tees

Tees are cut as when needed, about every other week. They have been divited on a regular basis, but we are finding heavy rain washes the sand out and gives the appearances that they have been missed.

Fairways are cut a 14mm and only when required

We have finished reveting the bunkers and will start to lay turf on the top edges week commencing 22nd January.

15th fence safety netting needs to be replaced

- Cost of net £270.12 inc. carriage ad VAT (we also need to take in the cost of hiring a cherry picker)
- Cot of supply and fitting net £1500

Awaiting a cost for pruning the tree by the 15th green

10th hedge date to confirmed with Danny Vanstone and costing to be submitted

Future work

- Solid tine greens

- Slit fairways
- Remove 10th hedge and make good
- Remove scrub right 11th tee
- Safety fence 15th
- Turf bunkers edges
- Obtain costing to extend main car park.
